Research experience

2021 Dec – PhD student working with clinical application of Fecal Microbiota Transplantation (FMT) at the Department of Hepatology and Gastroenterology, Aarhus University Hospital. During the PhD, I treat patients with *Clostridioides difficile* infection with FMT and include the patients in projects. I have included patients in the GCP-monitored randomized placebo-controlled double-blind clinical trial "Faecal microbiota transplantation for first and second episodes of *Clostridioides difficile* infection". Furthermore, I work with quality improvement of the FMT-system and continuously collect data on the effectiveness of FMT in a FMT database.

2016 – 2017 Research Year, "Noradrenaline in development and progression of non-alcoholic fatty liver disease: adrenergic receptor antagonism as a potential therapy", Aarhus University Hospital. Experience with laboratory animal science, qPCR, autoradiography and flow cytometry. Collaboration with Institute of Hepatology at Royal Free Hospital, London UK.
